# **Sustainable Quality Enhancement in Higher Education Learning and Teaching**

## **Integrative Core Dataset and Performance Data Analytics**

**Acronym: SQELT**

**Grant co-funded by European Union (Erasmus+ Projects)**

**Key Action: Cooperation for Innovation and the Exchange of Good Practices**

**Action: Strategic Partnerships**

**Main objective of the project: Development of Innovation**

**5th Transnational Project Meeting & 1st Multiplier Event**

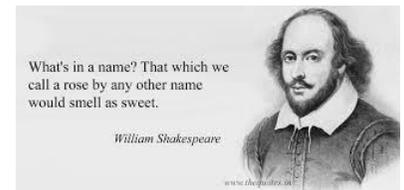

**Danube University Krems (DUK), Krems, Austria, 1-2 July 2019**

## Overview

- **SQELT** strategic partnership & case study & goals & methodology
- **Basic Elements of Performance Data Governance & Management (PDGM) in Learning and Teaching (L&T)**
- **Theories of Learning and Teaching (TOLT) and Their Models**
- **Justification and Contextualisation of Performance Indicators (PIs) of L&T: The complicated interweaving of types of performance, indicators and learning theories**

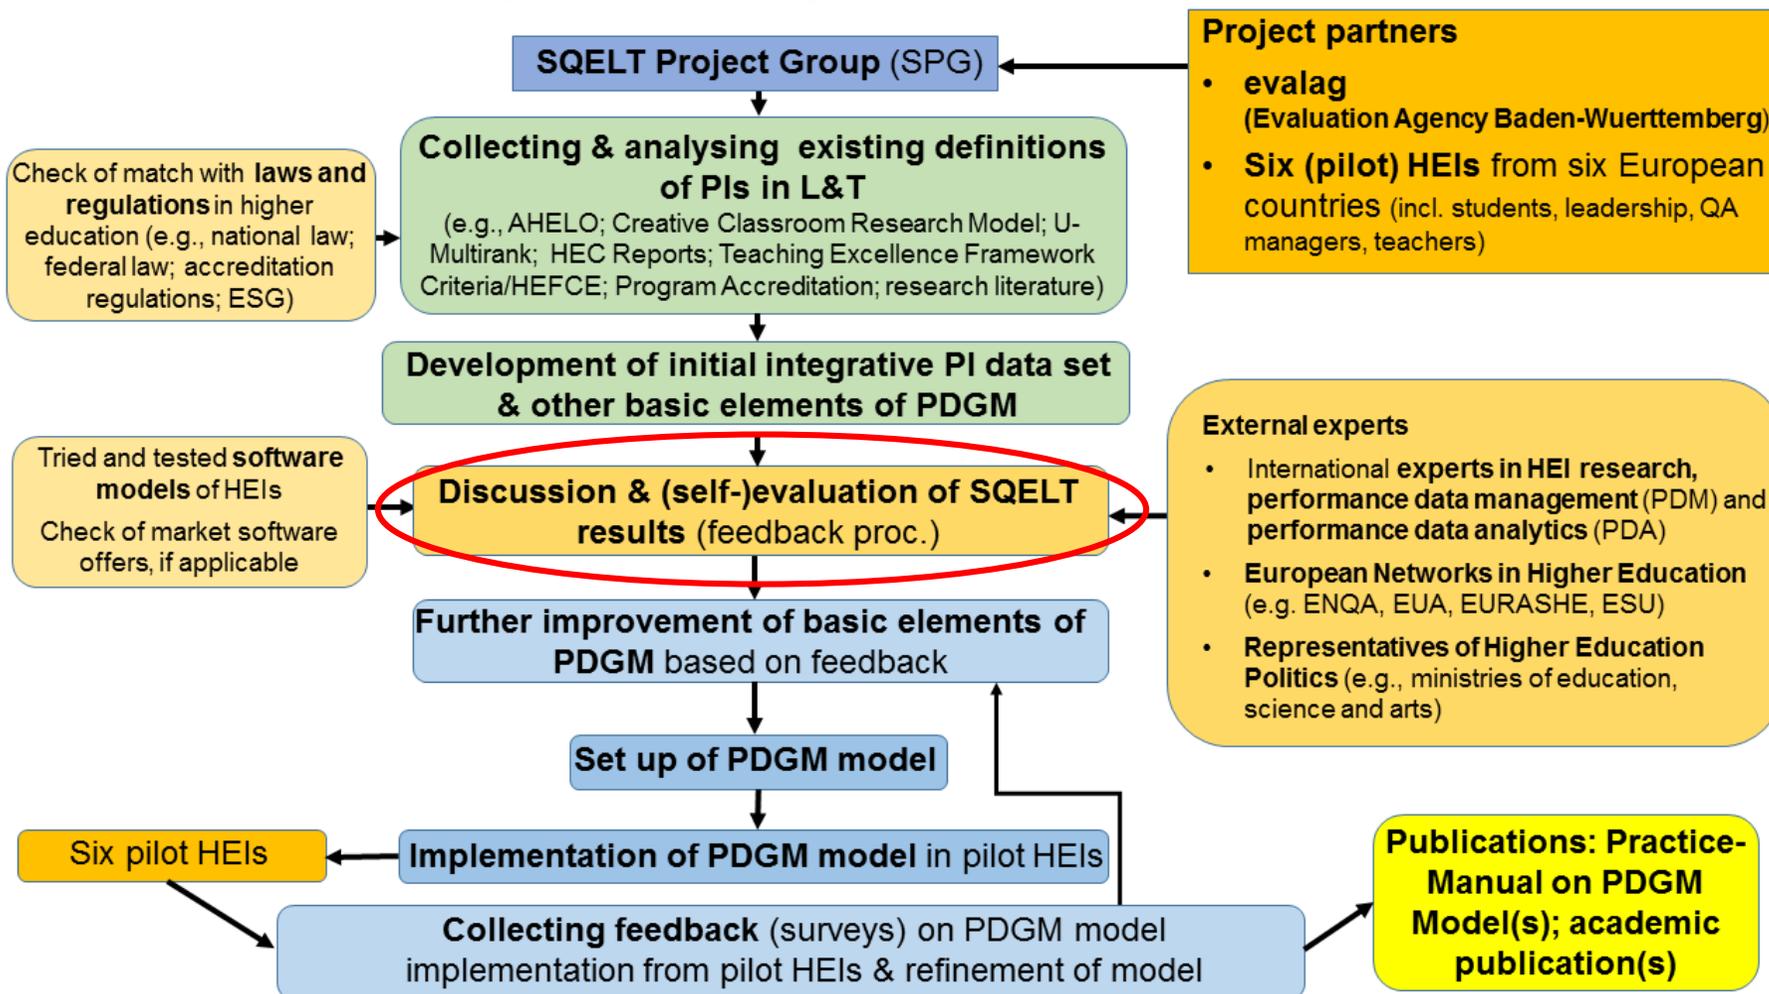

Country	University	Characteristics	No. students
Austria	Danube University Krems	Further education	9,000
Belgium	Ghent University	Comprehensive university	41,000
Italy	University of Milan	Comprehensive university	63,000
Poland	Jagiellonian University Kraków	Comprehensive university	44,000
Portugal	University of Aveiro	Natural, social, engineering, medical sciences; polytechnics profile; Public foundation under private law	15,000
UK	Birmingham City University	Health social, engineering sciences; business and law; art, media and design; Polytechnics roots	24,000
Germany	evalag	HE research, evaluations, accreditations, counseling	n/a
Netherlands	M. Beerkens, Uni Leiden	External expert	—
Norway	B. Stensaker, Uni Oslo	External expert	—
Portugal	C. Sarrico, CIPES	External expert	—

# Goals and methodology

## Workflow (schematic main steps) of SQELT project (updated)

## Goals and methodology

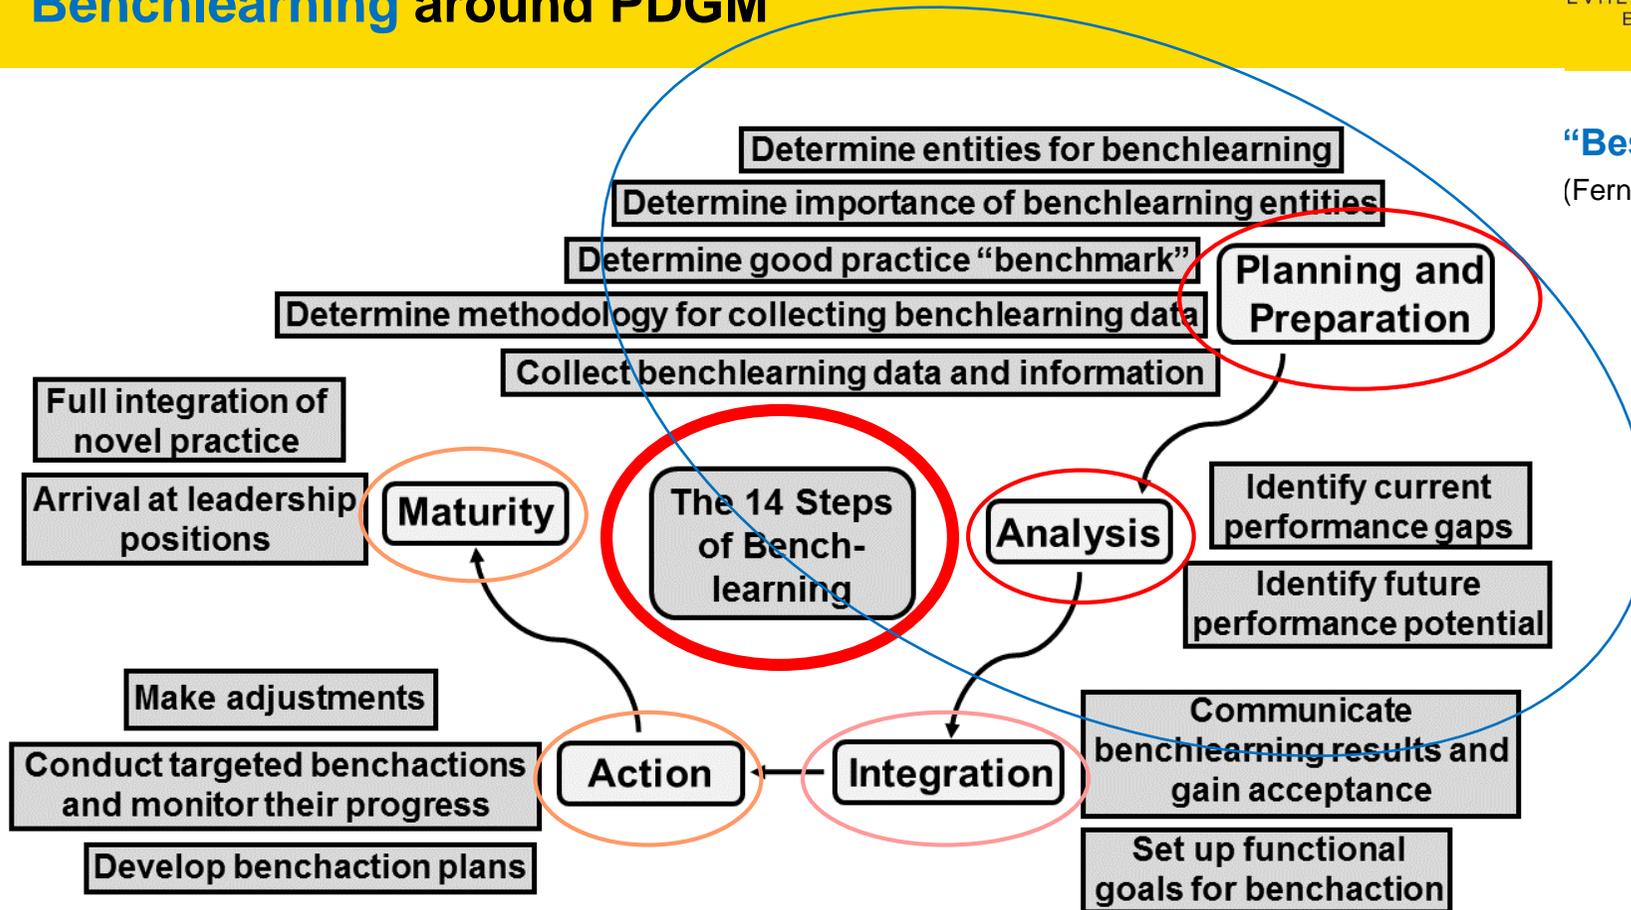

- Two main goals: **individual benchlearning** at partner HEIs & **intensive case study** including **generic results** (e.g. SQELT Manual; publications) (e.g. Leiber, 2019b)
- Aims at **comprehensive set of performance indicators (PIs) for L&T** and their **PDGM framework** (comprehensive: of large scope; covering or involving much; inclusive; thorough; far-reaching; broad; widespread; detailed; cross-disciplinary)
- Builds on **available scholarly models of PDGM in L&T, research literature, benchlearning** and **surveys** with respect to PDGM models of **sample HEIs**, and **external experts'** knowledge
- Builds on **various PI models** (e.g. AHELO; Creative Classroom Research Model (Uni Leuven); **U Multirank**; HEC Reports; TEF/HEFCE; Program Accreditation; **NSSE Engagement Indicators**; **QILT** (Australian Quality Indicators for L&T); ...)

### Outputs of SQELT project

# Goals and methodology: Benchlearning around PDGM

“Best practice is a myth”  
(Fernie and Thorpe, 2007, p. 328)

Benchlearning is a way of monitoring and assessing the strategies and performance of an organization against comparable, good-practice competitors; it includes an ongoing performance improvement strategy and change management process.

## Basic elements of PDGM

For the pursuit of these goals the following is “helpful”:

- **Identification of Stakeholders & usage of performance data – generic –**
- Actionable **Performance Data Governance & Management Policy (PDGMP)** (& its various supporting documents) – **generic –** : Indispensable for HEIs as autonomous, multiple-hybrid organisations: **regulates** issues of **governance & strategy**; **ethics & responsibility**, including **sustainability**; **quality, accessibility & usability** of information & data (about student lifecycle); **investments** of human & financial resources.
- **(Digital) PDM System** is required that makes performance data/information operational and coherent. – ‘quasi-generic’ –
- **Suitable set of PIs** to monitor, measure & report information & data related to L&T – ‘quasi-generic’, comprehensive –
- **Systematic & ongoing reflection** of **methodological & ethical** issues of PDGM is essential to secure validity, reliability, moral values. – (theoretically) generic (in the EU) –
- **Vivid PDGM culture: sufficiently widespread understanding** of PDGM ownership & related interpretation capabilities & evidence-based decision-making

## Basic elements of PDGM

### Few selected arguments for PIs:

‘PIs can be defined as concepts that represent **qualitative and quantitative** information and data, which **indicate** functional qualities (‘performance’) of institutional, organisational or individual performance providers. As such, PIs provide information about the degree to which quality performance objectives [can be or] are being met. This **modelling perspective** seems to be indispensable for any systematic approach to QM, particularly development-oriented QM in HEIs’ (Leiber, 2019b, 77).

- PIs are **(only) indicating** something about their related performance; PIs are **not “complete or perfect images”** of their related performance
- ‘PIs **reflect the quality goals** (‘targeted performance’) of institutions, institutional units and programmes’ (Leiber 2019b, 77), **in more direct or more indirect ways**
- PIs can **‘open the way to objectify communication and operationalisation of quality relevant features and, in the case of quantitative PIs, measure them’** (Leiber 2019b, 77)

## Basic elements of PDGM

### Few selected arguments for PIs:

- ‘PIs are used by HEIs for two primary reasons
  - to **facilitate monitoring, assessing and evaluating their performance** for the purposes of internal or external QM (for example, in audits, evaluations and accreditations)
  - to **provide information to the financiers** (e.g., government, taxpayers) **and potential beneficiaries** (e.g., students, broader public) for **accountability** and **reporting** purposes’ (Leiber 2019b, 77).
- ‘PIs are used at the national and international level mainly
  - to ensure **accountability for public funds**
  - to **facilitate national and international comparisons** of HEIs, e.g., by [...] [benchlearning], ratings and rankings, which are based on PIs’ (Leiber 2019b, 77)
- ‘[...] single PIs, or single types of PIs will usually **sketch trends** and **reveal interesting questions**. Due to the **performance complexity** of the **social multiple-hybrid organisations** called HEIs, single **PIs do not**, as a rule, **provide objective explanations that exhaustively cover a certain performance area or achievement**. [...] the measurement of single PIs normally does not permit immediate conclusions for quality improvement measures to be drawn in the sense of the Deming quality cycle. [...] **PIs need to be interpreted and contextualised in light of manifold information concerning strategies, purposes and operation** at institutional and programme levels. Accordingly, multiple sources of both quantitative data and qualitative information are needed to make PIs really informative about quality performance and make them a source of evidence for implementing enhancement measures’ (Leiber 2019b, 77-78).

## Some research questions of the SQELT case study

- **Theory-basedness of PIs: How can PIs of L&T be justified by, or “derived from” L&T theories?**
- **Integrative data management system:** How would a (digital) PDM System (incl. software solutions) allow for integration of data from different sources? How generic can suggested PDM System models be?
- **Aggregation levels of PIs:** Differentiation of “aggregate data” and “base data” – PIs & simple PIs? – further classification & relations of PIs (list necessary, useful, ...?)
- **Data analytics and data privacy:** Clarify, harmonise (?) different ethical regulations in different countries and HEIs.
- **Performance data policy:** Consensus on a PDGM Policy (docu

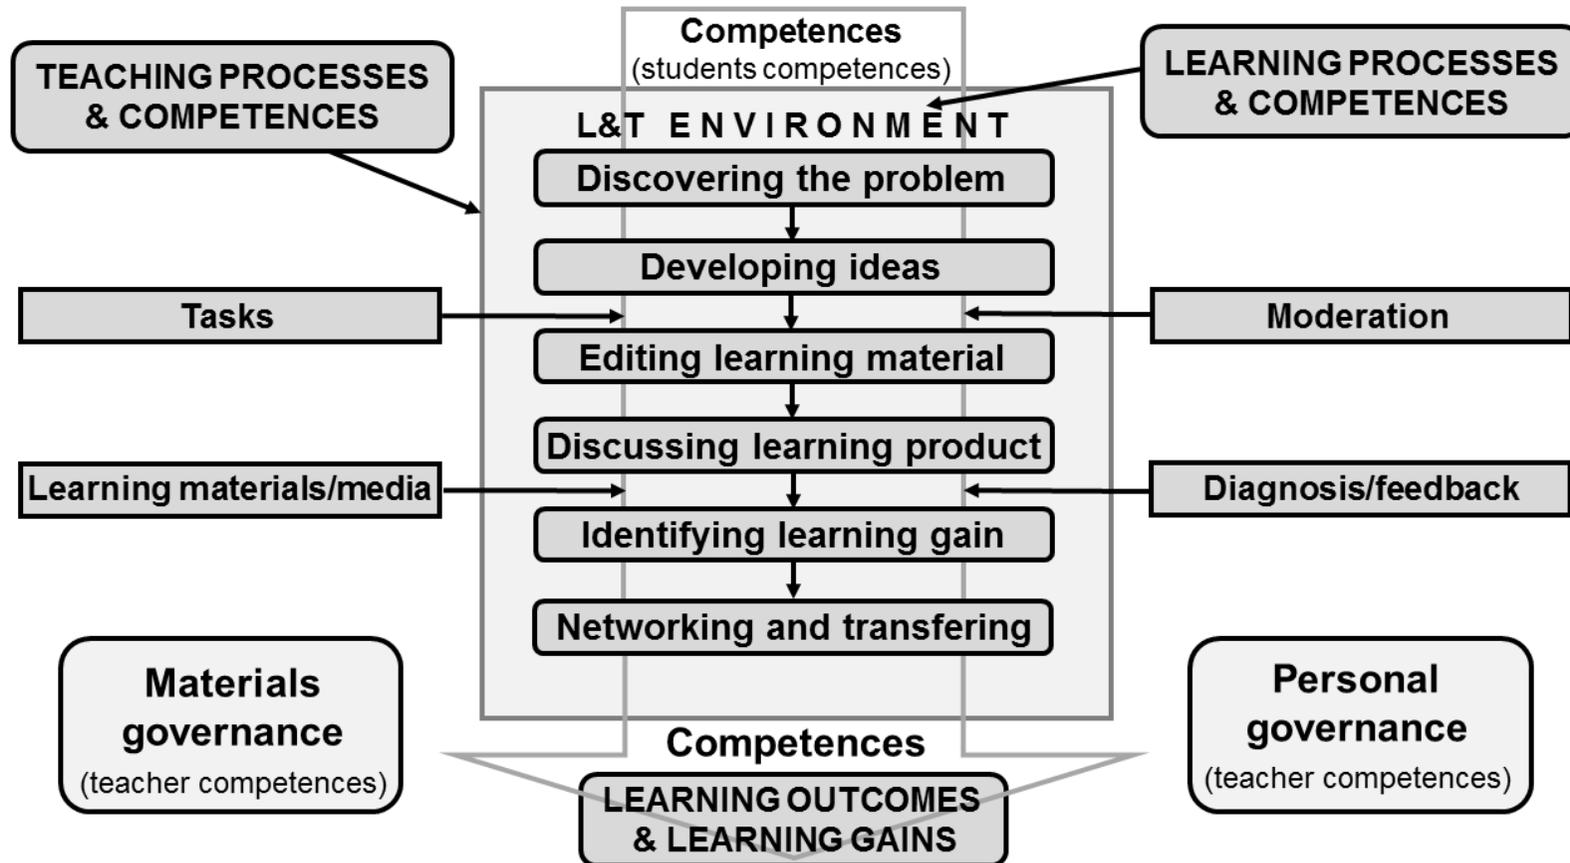

# Theories of learning and teaching (TOLT) and their models

# Theories of learning and teaching (TOLT) and their models

## Transformative and Holistic Continuing Self-Directed Learning (THCSDL) theory

(du Toit-Brits, 2018, 55, with alterations)

THCSDL theory attempts to model 'a **meaning-making holistic personal development process transforming students into mature, self-actualized, self-engaged, independent and empowered individuals** that have the mind-set of growth [better: enhancement], aptitude/capability of taking ownership, authentic control of and accountability for their learning, and in so doing, fostering intellectual openness **to evolve into self-directed lifelong goal-oriented students**' (Du Troit-Brits, 2018, 62).

6 TOL(T)	Core assumptions & mechanisms relevant to L&T	Selected core aspects relevant for L&T performance and PIs
<b>Cognitive Information processing</b>	<p>Learning by <b>complex internal processing</b> and reinforcement (“deep learning”)</p> <p>Simultaneous <b>“three-level processing”</b> (SR; STM; LTM)</p>	<p><b>Consideration of the complex “three-level processing” when designing L&amp;T processes, learning outcome assessments and L&amp;T environment</b></p> <p>Option of digitisation of performance data and analysis</p> <p><b>Capture observable performance &amp; behavioural objectives/outcomes</b></p> <p><b>Capture observable satisfaction</b> of stakeholders</p> <p>Provision of adequate, frequent and clear <b>feedback based on assessments and evaluations including PIs</b></p> <p>Use of <b>incentive systems based on PIs</b></p>
<b>Behaviouristic</b>	<p>Learning is directly affected by <b>rewards</b>, absence of rewards, or punishment</p> <p><b>Learning by reinforcement</b> is based on <b>feedback</b></p> <p>Focus on (changes in) observable behaviour</p>	<p><b>Active discovery learning</b> (e.g. cooperative learning, problem-based learning, research-based learning, case studies, hands-on experiments)</p> <p><b>Critical thinking and self-determination</b></p> <p><b>Student-centredness</b> of L&amp;T</p>
<b>Cognitivist</b>	<p>Knowledge and learning are based on symbol manipulation and connection (symbol systems: syntax, semantics)</p> <p>Learning occurs as <b>systemic extension of syntax and semantics</b> of previous knowledge and skills</p> <p><b>Learners are actively involved</b> in generating knowledge and skills</p>	<p><b>Social-in-group and community-based learning</b> (e.g. cooperative and collaborative learning, situated learning, discussion and debates, group work)</p> <p><b>Student-centredness</b> of L&amp;T</p>
<b>Social</b>	<p>Learning is an <b>interactive social process</b> (situated learning; communities of practice; distributed cognition; intercultural experience and learning)</p>	<p><b>Responsibility of learners for their learning process (SDL)</b></p> <p><b>L&amp;T/HEI performance as a holistic phenomenon</b></p> <p><b>Learning as dialogic and recursive processes</b> (e.g. cooperative and collaborative learning, discussion and debates, group work, self-directed learning)</p> <p><b>Student-centredness</b> of L&amp;T</p>
<b>Constructivist</b>	<p>Learning is an interactive social process and knowledge is <b>actively constructed</b> in and by contextualised situations</p>	<p><b>Responsibility of learners for their learning process (SDL)</b></p> <p><b>Critical thinking and self-determination</b></p> <p><b>L&amp;T/HEI performance as a holistic phenomenon</b></p> <p><b>Learning as dialogic and recursive processes</b> (see above)</p> <p><b>Student-centredness</b> of L&amp;T</p>
<b>Humanistic</b>	<p>Humans are intrinsically motivated for <b>self-determination</b>, self-actualisation and learning; <b>personality development</b> is core</p> <p>Learning motivation and success depends upon a <b>hierarchy of needs</b> (physiological, psychological, intellectual)</p> <p>Learning involves both <b>affective and cognitive</b> enhancement</p>	<p><b>Responsibility of learners for their learning process (SDL)</b></p> <p><b>Critical thinking and self-determination</b></p> <p><b>L&amp;T/HEI performance as a holistic phenomenon</b></p> <p><b>Learning as dialogic and recursive processes</b> (see above)</p> <p><b>Student-centredness</b> of L&amp;T</p>

# Justification and Contextualisation of Performance Indicators (PIs) of L&T: The complicated interweaving of types of performance, indicators and learning theories

Performance types	Performance sub-types	("Non-simple") PIs and their measures/performance measurement methods	Mainly, directly involved TOL(T)	Indirectly involved TOL(T), mediated across complicated, sometimes tiny, mechanisms
Learning resources	Organisation of study programmes	<p><b>Assessment</b> survey of students about <b>organisation of study programmes</b> (e.g. <b>transparency of entrance requirements/admission regulations</b>; access to classes; average class size; <b>completeness of courses offered compared to the study guide</b>; <b>transparency of the examination system</b>; <b>opportunity offers for studying abroad</b>; possibility of inclusion of study periods abroad)</p> <p><b>Assessment</b> survey of teaching staff about <b>organisation of study programmes</b></p> <p><b>Expert/peer assessment</b> (report) about <b>organisation of study programmes</b></p>	<b>Social</b> (performance options for intercultural experience and learning)	Aspects of <b>Self-directed learning</b> (SDL)
...	...	...		
Supportive environment	<b>Personality development</b> and well-being of students ( <b>social and societal competences</b> )	<p><b>Satisfaction</b> survey of students about measures of <b>encouraging contact among students from different backgrounds</b> (social, ethnic, religious)/<b>provision of opportunities for students to be involved socially/provision of student support for managing non-academic responsibilities</b> (e.g. work, family)/<b>experience in discussions with diverse others</b></p>	<p><b>Humanistic</b> (performance options for intercultural, social, non-academic experience and learning)</p> <p><b>Social</b> (performance options for intercultural, social, non-academic experience and learning)</p>	<p>Aspects of <b>Bloom's Taxonomy</b></p> <p>Aspects of <b>"Multiple Intelligences"</b></p>
